**Written Summary**

Recorded in 1981 by Michael Ann Williams, the Hickey House was built in the early 1880s for J. G. Hickey as a one-and-a-half-story frame dwelling. The original house was believed to have been built by a local carpenter named Jenkins, who also constructed the nearby Wood House (see CE188). Hickey’s son, Decatur Hickey, enlarged the house to its present two-story hip-roof appearance with a wraparound two-tiered porch. The house features an exterior stone chimney, shed-roof extension on the north side elevation, and original two-over-two double-hung sash on the façade. Unfortunately, window on the side elevations have been replaced with modern four-over-four sash. Beneath the porch, the façade is covered with flush boards on the first story and weatherboards on the second, but the north side elevation and shed-roof extension are clad with vinyl. The porch balustrades and single-leaf entry door are also replacements. (CG, 2012)

The original one-story frame structure was enlarged first to the southwest, adding one bay to the house. A change in the flush board sheathing beneath the porch on the façade marks the added bay. It was later remodeled into a two-story double-pile dwelling and contained five bedrooms and one bathroom. The house features an exterior stuccoed stone chimney, shed-roof extension on the northeast side elevation, and original two-over-two double-hung sash on the façade and southwest elevations. The current owner is in the process of covering the house with vinyl and replacing the windows with modern four-over-four sash; the northeast and rear (northwest) elevations have been completed. During the 1990s, the square wood porch posts, which had become severely deteriorated, were replaced. Around 2000, the porch balustrades and single-leaf entry door were also replaced.

The house was built by James Guinn Hickey sometime in the 1870s or 1880s. The property eventually passed to Thomas Decatur Hickey (1870-1941), the fourth son of James and Ruth Hickey, who remodeled and enlarged the house in the early twentieth century. Thomas Decatur Hickey, a farmer like his father, acquired the property from his parents in 1897 (Deed 32/271). He married Sarah Jane Taylor (1873-1943) of a neighboring family in 1892 and raised a large family. The Hickey's raised beef cattle as their primary farm product. To a lesser degree they raised hogs and, when they became an important cash product, chickens. They kept a small garden and two dairy cows for the family's use. The family, which was active in the Friendship Baptist Church, operated a general store. Thomas Hickey served as a Cherokee County commissioner. The Hickeys' daughter Leora (1905-1984), the sixth of seven daughters, married Guy William McNabb (1907-1982) of another local family.

Married in 1928, Guy and Leora McNabb eventually bought out the interests in the Hickey family farm from her siblings in the 1940s (Deeds 149/153 and 149/155). Guy McNabb worked for the Tennessee Valley Authority (TVA) during the construction of the Hiwassee, Fontana, and Watts Bar dams in the 1930s and 1940s. After they moved into the Hickey House, Leora McNabb continued to work as a beautician, while Guy McNabb occasionally cut hair as a barber in the first-story room at the southwest corner of the house. Following his employment with the TVA, Guy McNabb did sheet metal work and built the shop adjacent to the house. Based on the construction and materials, Guy McNabb likely built the garage around the same time as the sheet metal shop and also erected the basketball goal with a tapered metal post. The McNabb's raised three children, and the house passed to their son, William Larry McNabb (1945-2012), and his wife Glenda Roberson, in the late twentieth century. The house is presently owned by Chad McNabb, one of Larry and Glenda McNabb's two sons

At present, only the Hickey House and detached garage occupy this half-acre parcel owned by Chad and Theresa McNabb. Mr. McNabb's mother, Glenda, owns a 91.7-acre tract that circumscribes this parcel and contains a majority of the outbuildings and agricultural land associated with the Hickey House (see CE 220). (CG, 2013)

**Written Summary**

The property at 3610 NC Hwy 294 (CE 228) also appears to include the former site of the Taylor Log House, which was recorded by Michael Ann Williams in 1981. Based on her survey photographs, the building appears to have stood at the northwest end of this property near the location of the present metal storage building. The northwest end of the side of the surviving house appears to be visible beyond the Taylor Log House in one of the photos and the Hickey House outbuildings (CE 117 & 220) are clearly visible across the road in another photograph. (CG, 2012)

**Written Summary**

Recorded in 1981 by Michael Ann Williams, the Wood House appears to have been demolished in recent years. A structure appears at this location on the county's 2008 aerial photography. It is possible that the house on the adjacent property, 5165 NC Hwy 294, which is also owned by members of the Wood family, is the house that was surveyed by Ms. Williams. This seems unlikely, however, since the present structure is considerably larger than the one photographed in 1981, and the present house has a significantly different roof line. It is also covered with vinyl siding and has modern one-over-one windows. (CG, 2012)

**Written Summary**

This one-story, side-gable Minimal Traditional-style frame house is located on the west side of the road and shaded by several large trees on the property. Resting on a concrete block foundation, the house is covered with asbestos shingle siding and features a front-gable entry porch, façade picture window, aluminum window awnings, and two-over-two double-hung sash with horizontal muntins. The front porch displays a replacement wood balustrade. An elevated wood deck is attached to the south elevation of the house and provides access to a side entrance. (CG, 2012)

**Written Summary**

The house at the center of this small farmstead is an unusual structure that is neither clearly historic nor obviously modern. The main house, which is reached by a curving unpaved driveway, is sited to take advantage of the sloping topography in a manner similar to 1970s-era split-level residences. Covered with board-and-batten, the house is one-and-a-half-stories with a tall side-gable roof and side-gable wings. Two gabled front dormers are located on the center section, and the front slope of the roof on the south wing extends down to nearly ground level. An offset front-gable entry pavilion contains an arched, single-leaf wood door set within a low-relief flat-headed surround. An uncovered wood deck accesses the front entrance. Windows throughout are typically small six-over-six double-hung sash. The south wing of the house partially extends over a hip-roof single-bay garage at the foundation. The garage is entered through a metal overhead door and the windows are two-over-two sash with horizontal muntins. A gable-roof sunroom has been added above the garage and is lit by banks of three-light, metal-frame louvered windows on the three exposed elevations. An elevated wood deck is attached at the rear.

The house probably dates from the latter part of the twentieth century, although it is not entirely clear based on its exterior appearance. A few Tudor Revival-inspired elements, including the multi-gable roof, front-gable entry pavilion, and entry door, suggest that the house could be older, but it seems unlikely that it was built before 1960. The outbuildings are generally unremarkable. (CG, 2012)

**Outbuildings/Features**

FeatureType	Material	CircaDate	Condition	Contrib
-------------	----------	-----------	-----------	---------

**Animal pen** Frame Good

Above the house to the northwest, a one-story frame animal barn is covered with metal sheathing and capped by a low-pitched standing-seam metal roof. (CG, 2012)

**Shelter** Metal Good

In a lower field southeast of the house, is a prefabricated shelter with metal posts and a corrugated metal front-gable roof. (CG, 2012)

**Shed** Frame Good

A one-story frame building with a metal-clad shed roof, board-and-batten and metal siding, metal sliding and double-leaf wood garage doors, and an attached asphalt-shingle pent roof is located alongside the driveway. (CG, 2012)

**Goat Barn** Frame 1950 Good

In a lower field southeast of the house, is a prefabricated shelter with metal posts and a corrugated metal front-gable roof. (CG, 2012)

**Written Summary**

Built around 1973, this one-story, brick Ranch house occupies a 91-acre parcel that encircles two other family-owned houses including the Hickey House (CE 117) at 3845 NC Hwy 294 and a modern house at 4045 NC Hwy 294. The property also encompasses the majority of outbuildings historically associated with the Hickey House. The main house is located on the northern side of the property and occupies a grassy knoll. (CG, 2012)

**Outbuildings/Features**

FeatureType	Material	CircaDate	Condition	Contrib
<b>Barn</b>	Frame	1930	Good	<b>Y</b>
A substantial, gambrel-roof frame barn is located to the southwest of the house. Built against the bank, the barn has a center passage on the upper level and a transverse center passage on the lower level. The barn is covered with wood plank siding and vented horizontal slats; it is capped by a standing-seam metal roof. (CG, 2013)				
<b>Brood house</b>	Frame	1940	Fair	<b>Y</b>
The small one-story brood house rests on a concrete foundation and is capped by a metal shed roof. The building appears to be constructed of wood frame and clad with vertical wood siding. Sheet metal panels have been attached over much of the exterior. A single-leaf wood door is located on the east elevation. (CG, 2013)				

<b>Cow barn</b>	Metal	1940, 200	Good	N
Three-bay shed-roof frame structure with three enclosed stalls accessed from the front elevation. Now covered with metal siding, the building was remodeled in the late-1990s. (CG, 2013)				
<b>Chicken house</b>	Frame	1945	Poor	Y
A long, one-story, center-passage frame chicken house is capped by a low-pitched gable roof clad with metal. It is located behind the hay barn and largely screened from view. (CG, 2013)				
<b>Sheet metal shop</b>	Masonry	1945	Good	Y
Built for Guy McNabb in the 1940s or early 1950s, the sheet metal shop abuts the driveway and is accessible at grade on both stories. The second-story front elevation features a single-leaf metal door sheltered by a metal canopy suspended from tie rods. The windows throughout are ten-light metal-frame industrial sash. A narrow set of concrete steps descends along the north elevation to the first-story entrances on the east side. A single-leaf metal door and a metal garage door provide access to the first-story interior. The garage door slides along an exterior track. An open, one-story shed extension on the south side of the building is capped with a metal roof and covered with metal sheathing along the south elevation. (CG, 2013)				
<b>Shed</b>	Frame	1973	Good	N
One-story side-gable frame shed with one enclosed and one open bay. The exterior is covered with vertical wood sheathing. The enclosed bay is entered through a single-leaf solid wood door and lit by a four-light fixed-sash window. (CG, 2012)				
<b>Garage</b>	Masonry	1973	Good	N
One-story three-bay garage with a side-gable roof, metal overhead doors, and a single-leaf entry to the side. (CG, 2012)				
<b>Hay barn</b>	Metal	2005	Good	N
Three-bay three-sided metal structure with a side-gable roof. (CG, 2013)				
<b>Tractor shed</b>	Metal	2005	Good	N
Two-bay three-sided metal structure with a side-gable roof. (CG, 2013)

#### Written Summary

Located in a field on a parcel containing no other structures, this one-story shed-roof agricultural outbuilding may have once been part of the farm associated with the Hickey House (see CE 117), which stands a short distance to the north. The structure is six bays wide and three bays deep and supported on peeled log posts. A wall of wood plank siding separates the rear (southwest) section of the structure from the open front bays. The roof is covered with standing-seam metal. (CG, 2012)

**Written Summary**

The house associated with the early-twentieth century barn on this property appears to be of fairly recent construction. The house is composed of a center two-story section capped by a pyramidal roof, one-story gable-on-hip-roof wing containing an inset porch, and one-story hip-roof wings at the side and rear. It is covered with vinyl siding and a stone-veneer apron. Windows appear to be typically single-pane fixed sash. The wing to the southwest includes a large window of glass block. (CG, 2012)

**Outbuildings/Features**

FeatureType	Material	CircaDate	Condition	Contrib
<b>Barn</b>	Frame	1910	Poor	<b>Y</b>

A deteriorated two-story frame barn is located on a 19-acre tract with a modern (or heavily remodeled) two-story stone and frame house. The large, front-gable structure has a standing-seam metal roof, stone foundation, wood plank siding, and an enclosed shed extension on the north side. Approximately half of the siding on the façade is removed and sections of the roofing material have been lost or damaged. (CG, 2012)

**Written Summary**

The present home of the Friendship Baptist Church, which organized in 1866, was constructed around 1905, on an elevated site to the northeast of NC 294 in the Suit community. The front-gable frame building features a tall, gable wing on the southwest side and a one-story shed extension on the northeast side. The gabled wing on the southwest side of the church originally formed the front of the building, which was covered with weatherboards and featured peaked window lintels. In 1960, the interior sanctuary was re-oriented southeast-northwest and small entrance vestibule was added on the southeast elevation. A front-gable entry porch sheltering the vestibule displays a wooden cross in the open gable end and is surmounted by a vinyl-clad bell tower. The original bell tower rose from the side gable wing above the original entrance. A slender steeple rests on an octagonal base above a square plinth on the main roof. The steeple base displays four narrow paneled faces separating four wide faces with arched multi-light windows. The original structure has been extensively remodeled with vinyl siding and stuccoed foundation. The vinyl siding has obscured the majority of historic exterior details, including window openings.

In addition to remodeling of the original building, the church has been altered with a one-story rear ell and a two-story L-shaped fellowship hall that extends to the northeast from the sanctuary. Built in 1988, the one-story rear wing rests on a concrete block foundation and contains offices. Three single-leaf entrances on the southwest elevation are reached from concrete steps. The windows are modern one-over-one sash. The fellowship hall wing, which was added in 2001, connects to the rear wing at the north corner of the sanctuary and is built against the slope of the hillside. Concrete retaining walls extend from both ends of the fellowship hall to support a narrow paved driveway that passes along the northeast elevation and accesses a

second-story single-leaf entrance. The upper entrance is sheltered by a front-gable porch on square wood posts. An attached front-gable porch on the southeast elevation shelters double-leaf entrance doors on the first story. The vinyl-clad wing displays modern six-over-six windows. (CG, 2013)

**Outbuildings/Features**

<b>FeatureType</b>	<b>Material</b>	<b>CircaDate</b>	<b>Condition</b>	<b>Contrib</b>
<b>Cemetery</b>		1887	Good	
<p>The church cemetery occupies a grassy hillside above the church and is shaded by mature oak trees. A paved loop driveway accessed from Friendship Baptist Church Road (SR 1311) encircles the cemetery, which contains several hundred graves. The earliest recorded grave belongs to Arthur Abernathy, who died as a child in 1887. Only nine stones record burials from before 1900. Forty veterans are interred here, including servicemen from every major conflict from the Civil War through the Vietnam War. The Stiles, McNabb, Beavers, and Wood/Woods families are represented most frequently among the cemetery’s marked stones. The nineteenth-century burying ground was formally enlarged in 1891, when J. C. and Cordelia Jenkins donated “one acre or more if ever needed for a graveyard where the graveyard is at present on top of a hill east of our house to be oblong in shape.” The Jenkins’ donation to make the graveyard permanent was given “without any conditions or qualifications.” (Deed 25/495) (CG, 2013)</p>				

<b>Friendship School</b>	Frame	1906	Good	N
<p>A one-story side-gable frame building with a concrete block foundation, vinyl siding, and replacement one-over-one windows is located on the northeast side of the paved parking lot that lies in front of the church building. An attached front-gable entry porch supported on metal posts shelters the single-leaf entry door. A shed-roof extension on the southeast end of the building contains a one-bay carport and enclosed storage room at the rear. The building, erected in 1906, originally housed the two-room Friendship School and a Masonic hall. The church purchased the building from the Cherokee County Board of Education in 1951 and remodeled it into a parsonage. The building served as a parsonage from 1960 to 1987. It was renovated again in 2000 for use as the meeting house for the youth of Fellowship Baptist Church. (CG, 2013)</p>				

<b>Maintenance building</b>	Masonry	1976	Good	N
<p>A small, one-story, side-gable maintenance building stands at the southwest end of the cemetery, which is nearest to the church building. The concrete block structure exhibits a single-leaf entry door and metal overhead door on the front elevation. Small metal-frame windows are positioned on the narrow side elevations, with vinyl siding in the upper gable ends. (CG, 2013)</p>

**Written Summary**

Located on an elevated site at a curve in the highway, the house is a one-story hip-roof frame dwelling with an attached wraparound porch and projecting side wing on the northwest side. The eclectic dwelling features a clipped, decorative front gable, standing-seam metal roof, square porch posts, and four-light and six-over-six double-hung windows. It has been altered with a stuccoed foundation, vinyl siding, replacement porch balustrade, and an elevated wood deck attached to the northwest side in front of the wing. The attached porch is carried on square wood posts and exhibits a decorative front gable with beaded board siding and a row of five square lights above the entry bay.

This property also appears to include the former site of the Taylor Log House (CE 180), which was recorded by Michael Ann Williams in 1981. Based on her survey photographs, the building appears to have stood at the northwest end of this property near the location of the present metal storage building. The northwest end of the side of the surviving house appears to be visible beyond the Taylor Log House in one of the photos and the Hickey House outbuildings (see CE 117 & 220) are clearly visible across the road in another photograph. It is odd, however, that the ca. 1925 house was not recorded along with the log house. Nonetheless, the Taylor Log House is no longer standing at this location.(CG, 2012)

**Written Summary**

It is unclear if this is a heavily altered older house with modern materials and additions or if it is modern construction with a core form that is historic in appearance. The main section of the house appears to be a Craftsman-inspired one-story front-gable frame bungalow with an attached front-gable porch. A two-story side-gable wing projects to the southeast and contains two garage bays in the lower story. A stone retaining wall borders the driveway on the southeast side as it approaches the garage bays. The house is located at the gated entrance to a modern residential development called Stag's Leap. (CG, 2012)
