National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

8. Statement of Significance**Applicable National Register Criteria**

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ **B** Property is associated with the lives of persons significant in our past.
- ☒ **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ **D** Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ **A** owned by a religious institution or used for religious purposes.
- ☐ **B** removed from its original location.
- ☐ **C** a birthplace or grave.
- ☐ **D** a cemetery.
- ☐ **E** a reconstructed building, object, or structure.
- ☐ **F** a commemorative property.
- ☐ **G** less than 50 years of age or achieved significance within the past 50 years.

Narrative Description

Located to the north-northwest of downtown Raleigh, Hayes Barton is one of five neighborhoods surrounding the large, Five Points intersection (the others include Hayes Barton to the immediate south, Vanguard Park to the immediate southeast in a wedge between Whitaker Mill Road and White Oak Road, Roanoke Park to the south of Vanguard Park, and Georgetown to the east of Roanoke Park). At Five Points, Glenwood Avenue, one of Raleigh's primary north-south arteries, intersects with the major thoroughfares of Fairview Road (northwest-southeast) and Whitaker Mill Road (east-west), which intersect (along with a short section of the Hayes Barton street, Glenn Avenue) to form the Five Points intersection. The Hayes Barton neighborhood was originally developed south of Fairview Road, on rolling terrain between

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

Section number 7 Page 2

Hayes Barton Historic District, Wake County, North Carolina

Oberlin Road, which runs along the ridge of a low hill to the west, and the industrial corridor that developed along the railroad tracks to the east. The southern edge of the neighborhood was defined by a small stream at the foot of the hill near the property line with the Methodist Orphanage. Today, the boundaries for the Hayes Barton Historic District are Fairview Road to the north, Wade Avenue to the south, St. Mary's Street to the west, and Aycock Street and Scales Street to the east. Wade Avenue, the main thoroughfare in and out of downtown Raleigh, was built just to the south of the neighborhood in the mid-twentieth century. At the time of the neighborhood's creation, the surrounding area had little development, though the Methodist Orphanage, which predates the development of Hayes Barton was located adjacent to the southern edge of the neighborhood.

The terrain, with its undulating contours, is extremely important to the overall design and character of Hayes Barton. Curving streets such as Jarvis Street and Iredell Drive follow the contour of the land with their curves. In contrast, Cowper Drive and Holt Drive utilize a narrow, cove-like feature along a tiny stream. These streets pass on either side of the stream creating a naturalistic area, Potomac Park, in the median. The houses along Cowper are some of the grandest in the neighborhood and sit on a steep rise overlooking Potomac Park.

Not surprisingly, the houses along Cowper Drive have the largest lots in the neighborhood. Otherwise, the lot size throughout Hayes Barton is relatively uniform. Vance Street, Harvey Street, and Fairview Road illustrate the average, generous, lot size. While the lots along Carr Street and Caswell Street tend to be smaller. Similarly, with the exception of Holt Drive and the south side of Cowper Drive, the setback of Hayes Barton's houses from the street is generous and fairly uniform. Along Holt and Cowper, the setback is much greater, giving each house a manor-like setting. The distance between houses is also fairly uniform, except along the southern side of Cowper where the space between houses is quite wide. Overall, the spacing between houses is relatively narrow, creating a contrast between the idea of spacious, individual lots giving the illusion of a private estate and the high density that was necessary to the financial success of the development.

The houses along Cowper and Holt drives and the adjacent Potomac Park, form the heart of Hayes Barton and illustrate the neighborhood at its grandest. Aimed at the wealthiest home buyers, this area was central to neighborhood in terms of design as well as its marketing concept. The streets surrounding this core contain many large and architecturally impressive houses for some of Raleigh's more prominent citizens and were made more desirable by their proximity to the well-designed, elite enclave near the park.

Although part of the original 1920 plat, the area of Hayes Barton on the east side of Glenwood Avenue has a different character than the rest of the neighborhood. This difference may be due in part to its separation from the Potomac Park area by Glenwood Avenue. In this section, lot sizes and street patterns are more disjointed with very little respect for the existing

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Section number 7 Page 3

Hayes Barton Historic District, Wake County, North Carolina

terrain. Reflecting this difference, the houses in this area tend to be smaller, with fewer elaborate examples of an architecture style. Overall, this area is more akin to the adjacent neighborhoods of Bloomsbury and Roanoke Park.

The earliest homes in the district date from around 1920. The first house to be built in the new suburb is believed to be the Fetter house at 916 Cowper Drive (c. 1920, inventory #65), which may have been originally built for a C. L. Jenkins by Charles V. York. It is a two-story, Foursquare with Arts & Crafts influences and has a hip roof and wrap-around porch. Home construction expanded throughout the 1920s with nearly one half of all the houses in the neighborhood being constructed during the mid and late 1920s.¹ The earliest dwellings are clustered near the elite core at Potomac Park, especially on Carr Street, Harvey Street, Holt Drive, and Cowper Drive. Other 1920s development is scattered throughout the district.

The majority of these 1920s houses exhibit one of the popular period revival styles, with Georgian Revival being the most common. Two of the best examples of Georgian Revival design can be found on Holt Drive. The Connor House, at 825 Holt Drive (inventory #225) was built in the mid to late 1920s. It is a two-story, double-pile, symmetrical, brick house with classical elements such as modillions, an elliptical fanlight, and sidelights. Another excellent example is the Smith House at 917 Holt Drive (inventory #230). Built in the late 1930s, the two-story, brick house illustrates the simpler detailing of Recovery Era dwellings. It has a two-story, pedimented central section with broken pediment doorway and quoins.

Demonstrating the economic means of citizens choosing to reside in Hayes Barton, construction did not cease even during the economic hardships of the Great Depression. There are several houses from the 1930s, especially examples dating from the late 1930s, into the early 1940s. On Caswell Street, for example, there is a concentration of houses dating from the 1930s.

Related to the Georgian Revival is the Dutch Colonial Revival style. There are several houses in this style in the district. The Yancey House at 1804 St. Mary's Street (late 1920s, inventory #343) is a good example. It is brick with weatherboard shed dormer on the gambrel roof. The central entry has a small, pedimented porch.

The C. V. York House at 1002 Cowper Drive (inventory #71) illustrates another revival style, the Tudor Revival. Built in the late 1920s, this is the most extravagant Tudor Revival house in Hayes Barton. The brick and stucco dwelling has half timbering, massive battered piers supporting the porte cochere and two facade gables with the larger gable extending into the cat-slide roof of the side porch. Illustrating the relationship of Tudor Revival to the Colonial

Revival style, the chimney is a replica of the one at Bacon's Castle, Virginia. Styles born of English influence held great appeal during that time, as they represented a privileged link with America's past and symbolized the established prominence of English aristocracy. Such positioning is clearly evident in the November 13, 1920 *Raleigh Times* advertisement for the neighborhood, which boasts a photograph of the Tudoresque country home called "Hayes-Barton," described as the home and birthplace of Sir Walter Raleigh. That the developers of the neighborhood would name their new development after the home place of Raleigh's namesake was an indication of the perceptions of the times. Property owners in the neighborhood would continue this trend by selecting the appropriate English revival styles for their homes or as in the case of the York House, combining the English ideas with American Colonial motifs.

While the Georgian, Dutch Colonial, and Tudor revival style houses make up the majority of the housing stock in Hayes Barton, there is a smattering of other styles such as the Spanish Eclectic or Spanish Colonial Revival represented by the Sears mail order house on St. Mary's Street known as the "Alhambra." Other stylistic influences or popular house types include Craftsman Bungalows and American Foursquares. The Lee House (c. 1920s, inventory #417), located at 1012 Vance Street, is an unusual example of a Craftsman house that is not in the bungalow form. This two-story, brick, front gable house has wide eaves, knee braces, and porte-cochere. Bungalows are uncommon in the main part of the district, but are quite common on the east side of Glenwood Avenue. These bungalows, such as the one at 1605 Scales Street (c. 1930, inventory #383), represent the modest character of this section of the neighborhood. This one-and-a-half-story, weatherboard sheathed bungalow has a wide gabled dormer and engaged porch supported by battered columns on brick piers. American Foursquares are not very common in the district, but there are examples scattered throughout the area. The McLeod House at 918 Vance Street (early 1920s, inventory #405) is a good example. The two-story, brick, hip-roofed dwelling has wide overhangs, bracketed eaves, an attached front porch and porte-cochere.

By the late 1930s and early 1940s, the level of stylistic detail was substantially simplified and Craftsman references and Foursquare houses had fallen out of favor. Similar to the first phase of construction, the predominant style during this period is the Georgian Revival. Restrained Tudor Revival references were also common. The Ruffin House at 2027 St. Mary's Street (late 1930s, inventory #329) is an excellent example. The small, brick cottage has diamond-light windows, a facade chimney, and an asymmetrical gable entry with Tudor arch door.

During the 1940s, Minimal Traditional houses became increasingly common, particularly in the section of the neighborhood east of Glenwood Avenue. The house at 1507 Doughton (c. 1945, inventory #113) is a good example. It is a one-story cottage with a side gable roof and front gable projection. Nearly devoid of stylistic detail, the house has a facade chimney and a simple entry.

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

Section number 7 Page 5

Hayes Barton Historic District, Wake County, North Carolina

After World War II, the simplified aesthetic of the Minimal Traditional style became even more pronounced. Georgian Revival and Colonial Revival houses of this period continued to be two-story, brick dwellings, but the classical details became increasingly simple. By the mid-1950s, Ranch houses also began to come into favor in Hayes Barton. Several examples exist on the east side of Iredell Drive; others are scattered throughout the district.

Very little construction occurred in the district during the 1970s and 1980s, but during the 1990s, a handful of contemporary traditional dwellings have been constructed. In certain cases, older houses have been removed to make way for these modern houses. As in-town neighborhoods have increased in popularity, Hayes Barton is experiencing a period of change. Several smaller houses in the district, and even fairly sizeable ones, have been significantly altered in the last ten years with the addition of second stories and large wings, presumably to accommodate modern tastes and spatial demands. Substantial facade remodeling is also fairly common.

While the bulk of the district is, and was historically, single family residential, multi-family housing does play a role in its character. Historically, there were several duplexes in the neighborhood. One example is located at 1623-1625 St. Mary's Street (inventory #300). Dating from the late 1930s, the two-story, brick building has the restrained Colonial Revival detailing common in single family houses. Instead of a classical, central entry, however, each unit is accessed via small side porches. As the neighborhood has gained in popularity recently, several of duplexes have been converted to single family use.

Another common building type in the district is the garage or other small outbuilding. The large number of historic garages, many matching the design of the house, is indicative of the important role the automobile played in the development of the neighborhood. Many of the garages are simple, one-story, single bay buildings with either hip or front gable roofs. Located in the rear of the Thorn House, at 2017 St. Mary's Street (c.1930s, inventory #325), is a good example of this building type. This example is a small, brick, front gable garage. The building retains its original double-leaf, multi-light, wood doors. Some of the grandest houses in the neighborhood have elaborate, double-bay garages or garage apartments. Many of the more modest dwellings have substantial garages as well. Two-bay garages are very common and even modest houses such as the Everett House had large garages that matched the architecture of the residence. Located at 802 Williamson Drive (inventory #419), the Everett House was built around 1932 for Randall W. Everett, Jr., regional manager with the U.S. Farm Security Administration's Business Management Division. The house is a one-story, stone dwelling with jerkinhead roof. The garage is constructed of stone as well and has a front facing jerkinhead roof and two garage bays with double-leaf wooden doors. This garage represents both a significant expenditure and attention to detail. It signifies the importance of the automobile to the Everett family and even suggests that the Everetts, like many of their neighbors were a two-car family.

Continuation Sheet**

Section number 7 Page 6

Hayes Barton Historic District, Wake County, North Carolina

There are only three institutional buildings in the district, Hayes Baron United Methodist Church, United Lutheran Church, and Myrtle Underwood School. Hayes Barton United Methodist (inventory #140, 2209 Fairview Road) was constructed in the mid-1950s and United Lutheran Church (inventory #151, Glenwood Avenue) was constructed in the mid-1960s. Both have Modernist influences. The Underwood School (inventory #158, 1614 Glenwood Avenue), however, is a contributing resource constructed in 1926. The large, two-story brick building has a Tudor Revival stylistic features such as the crenellated parapet with cast stone cap. The recessed entry is surrounded by rusticated stone archway and has multi-light transom and sidelights.

In addition to the institutional buildings, there are several commercial buildings clustered near the Five Points intersection. These include the 1970s, Modernist style First Citizens Bank (inventory #125, 2001 Fairview Road) and a row of small, brick storefronts built during the mid and late 1940s. On Glenwood Avenue, there is a second row of commercial buildings including several non-contributing resources such as a service station and the Rialto Theater. This row also contains one of the oldest commercial buildings in the district. Built around 1935, this building (inventory #163, 1600 block of Glenwood Avenue) is a one-story, brick commercial building with two storefronts and herringbone brick pattern in sign panel. The double leaf doors and large display windows all have large transoms.

The east side of Glenwood Avenue, in the 1500 and 1600 blocks, has had several recent commercial and office additions. Houses, such as the Foursquare located at 1514 Glenwood (c. 1920s, inventory #152), have been significantly altered to accommodate their new uses. In other cases, new buildings, such as 1520 Glenwood Avenue (c. 2000, inventory #154), which has residential details, have been constructed to provide office space.

The district contains a total of 579 resources, of which 459 are contributing. (120 non-contributing). Of these resources, 146 are outbuildings, of which 32 are non-contributing.

Inventory list

This list is arranged alphabetically by street. The information in this inventory list was created primarily by Helen Ross during her 1990-1991 survey of the area. Updates and additional entries were added in 2001. The following bibliographic references were used in preparing the inventory list: NC HPO architectural survey files for the City of Raleigh and Raleigh City Directories for 1925, 1930, 1937, 1941, 1947, and 1952..

710 -732 Nash Drive

276 Median @ Nash Dr., Wade Ave. & Glenwood Ave. c.1920 Contributing Site

Although never a designed park space like Potomac Park, this area appears as an undeveloped buffer area on the 1922 plat. Reduced in size from the original plat, the area contained a stream and presumably was not desirable as building lots. It appears to have offered a buffered area between Hayes Barton and adjoining development (shown on historic platting maps as the Methodist Orphanage Campus and the Glenwood Subdivision). Currently, the median helps to shield the Nash Drive area of the District from Wade Avenue and should be maintained for its positive buffer.

277 710 Nash Drive House c.1925 Contributing

Dutch Colonial Revival. Two-story, stone and frame house with three over one and six-over-six sash. The upper level has aluminum siding. The central entry has a small classical portico. Andrew Beck resided here in 1925. He was a sales manager with Edwards and Broughton.

277a Carport c.1960 Non-contributing, age
Metal carport.

278 712 Nash Drive House c.1925 Non-contributing, integrity

Original Dutch Colonial Revival house has been modified with the removal of the gambrel roof and extension of the house to two full stories. The entry is similar to 710. The house is sheathed in pebble dash and brick (lower level). There is a single story addition on each side. Wilbur Spruill, a clerk, lived here in 1925.

279 714 Nash Drive House c.1925 Contributing

Foursquare form with Colonial Revival and Arts & Crafts influences. Two-story, brick Foursquare with central, balustraded, classical entry porch. The house has a hip roof and six-over-one sash. There is a small brick appendage on one side and a large, two-story frame addition on the other, which is reported to date prior to 1950. Sprague Silver, a motor supervisor at the N.C. Auto License Department resided here in 1925.

279a Garage c.1925 Contributing

Summary Paragraph

Located to the northwest of downtown Raleigh, the Hayes Barton Historic District is significant as an early twentieth century suburban neighborhood that developed from about 1920 until after World War II. Although sections of Hayes Barton were adjacent to the streetcar line on Glenwood Avenue and a portion of the neighborhood east of Glenwood was developed with modest homes, the neighborhood was marketed primarily to Raleigh's elite citizens who could afford automobiles. The large number of garages in the district testifies to the importance of the automobile in the development of the neighborhood, as well as the growing importance of the automobile to general development trends in cities and neighborhoods throughout the state.

The Hayes Barton neighborhood was designed by noted landscape architect Earle Sumner Draper. Draper's design signature was the preservation of the natural beauty of the rolling terrain using gently curving streets that followed the contour of the land and the incorporation of small streams into naturalistic median parks such as Potomac Park. This park became the center of the most elaborate dwellings in the Hayes Barton Historic District. Sited on a hill overlooking the park, these houses were conceived of as small estates. Surrounding this core were more modest (though still generous) lots that were marketed for their proximity to the elite core. Elite residential developments from this period were often planned to accommodate the natural surroundings in a manner that incorporated park spaces at locations within the neighborhood and that placed the best home sites at points of prominence, with views of natural settings, and with a sense of being secluded or of the nature of estates. Such commissions were often awarded to prominent designers, such as John Nolen's 1911 commission for Charlotte's Myers Park, which he later turned over to his fledgling designer Earle Draper. After his work at Myers Park, Draper went on to design some of the most prominent early twentieth century suburbs in North Carolina including Forest Hills in Durham, High Point's Emorywood, and Hayes Barton in Raleigh. Thus, the Hayes Barton Historic District is an important local example of a suburb planned by the regionally significant designer, Earle Draper. The district is eligible for listing on the National Register under Criterion C for community planning and development.

Politicians, upper-level businessmen, physicians, lawyers, insurance agents, bankers, and other professionals made their homes in Hayes Barton in houses representing some of the finest period revival architecture in Raleigh. The collection of Georgian Revival dwellings is exceptionally large, and other styles such as the Tudor Revival are also well represented. A number of houses were designed by prominent local architects, such as William Dietrick and Thomas W. Cooper, although the majority appear to be derived from stock plans. Many of the houses were constructed by Howard Satterfield and J.W. Coffey and Son, being two of the best-known and most sought-after contractors in Raleigh from the 1920s through the 1940s. Therefore, the Hayes Barton Historic District is also eligible for listing on the National Register under Criterion C for its collection of illustrative and representative examples of architectural styles from the period of significance. This collection, while it may hold several notable individual dwellings, is significant as a distinctive entity where most of the individual components are not individually important. As a whole, the district is a notable collection of early twentieth century architecture.

Furthermore, the attractiveness of the Five Points neighborhoods to potential buyers was heightened by the proximity of the elite Hayes Barton suburb. Hayes Barton is representative of the development of early suburban neighborhoods from their conception through the transitions inherent in altering lifestyles, technologies, and postwar changes in taste. It is also representative of the acceptable size, use, and social segregation that was a part of many early twentieth century restrictive developments. The role of Hayes Barton in the suburban development of Raleigh is significant and makes the district eligible to the National Register under Criterion A for community planning and development.

The period of significance of the district extends from 1920, the construction date of the oldest contributing resource to 1952. This period encompasses the majority of the buildings representing the popular revival styles, such as Colonial, Georgian, and Tudor Revival, that make up the first phases of development of the neighborhood during the 1920s. This period also encompasses other styles pervasive in the district, including Craftsman, American Foursquare, Neoclassical Revival. Furthermore, it incorporates styles that gained popularity during the Recovery Era and the post World War II period such as Period Cottage, Cape Cod, Minimal Traditional, and Ranch styles. Though there are fewer resources dating from the postwar era than from earlier decades of the district's development, these resources nonetheless contribute to a greater understanding of the overall development of the neighborhood and the changes in tastes and technology indicative of post World War II society. The neighborhood continued to be developed into the 1950s and 1960s, however, this period is not of exceptional significance, and therefore the period of significance ends with the fifty-year cut-off for Criteria A and C.

The Hayes Barton Historic District is discussed in the multiple property documentation form, "Historic and Architectural Resources of the Five Points Neighborhoods, 1913-1952" under the three contexts for the area "The Move to the Suburbs: Raleigh's Five Points Neighborhoods, 1900 - 1930," "Getting to the Suburbs: The Role of Transportation in the Five Points Neighborhoods, 1912 - 1930," and "The Architecture of Raleigh's Five Points Neighborhoods, 1913 - 1952 (pages E 2 - E 27). The historic district property type is also discussed in Section F (pages 28 - 34), and the Hayes Barton Historic District meets the registration requirements established for this property type.

Historical Background

Before 1920, the Five Points intersection was little more than the junction of several dirt roads and the streetcar line on Glenwood Avenue. The dirt roads linked the area farms and mills while the streetcar served Bloomsbury Amusement Park to the north. The park and streetcar line were installed in 1912 by Carolina Power and Light Company.¹ Consequently, the earliest development followed the streetcar and other transportation lines. This scattered construction consisted of only a few homes in the Five Points area and possibly a store prior to World War I.²

Other development was limited to two farms near Glenwood Avenue. B. Grimes Cowper owned a farm on the west side of Glenwood and Mrs. B.P. Williamson owned another on the east side. In 1919, Dan, Frank, and William Allen of Allen Brothers Realty made an agreement with these two property holders to develop their farm land.³

The Allen brothers, desiring to create a fashionable new suburb for Raleigh's elite, turned to landscape architect Earle Sumner Draper. Draper's involvement in the prestigious and trend-setting development of Myers Park in Charlotte made him a logical choice as designer of the elite suburb the Allens envisioned. Furthermore, based on comments made by Draper himself during a 1982 interview, it appears he became involved in the project via a connection with Secretary of the Navy, Josephus Daniels, who erected an imposing house on Caswell Street around 1920.⁴ Of representative and relative significance as compared to other of Draper's works Myers Park in Charlotte, Forest Hills in Durham, and High Point's Emorywood, the design utilized the natural terrain to its best advantage by creating naturalistic Potomac Park and wooded lots that gave the effect of small private estates and parks. A history of the neighborhood published in the *News*

and *Observer* in 1935 found that "much thought was given to the planning of streets and cutting of lots so that the natural beauty might be preserved..."⁵

Apparently Draper's design was given to Charles L. Mann, a civil engineering professor at North Carolina State College, who delineated the plat map after a survey during the summer of 1920.⁶ By 1921, improvements such as sewage connections, sidewalks and paved roads were installed on the entire 175-acre tract.⁷ These municipal services were made possible by the extension of the city limits in 1920. The expansion area was greater to the north and west to include areas, such as the Hayes Barton and Bloomsbury tracts, deemed prime for residential development and was intended to be an impetus for the growth in this area.⁸

Calling upon the Anglophile fashions of the time and the connection to Raleigh's namesake, the new suburb was named Hayes Barton after the birthplace of Sir Walter Raleigh in Devonshire, England. The plat map book cover sheet and a 1920 newspaper advertisement featured Hayes Barton House, a picturesque Tudor country house. Continuing the historical theme, the streets in the new suburb were named for former North Carolina governors such as Jarvis, Reid, Stone, and Vance.

Although the first home was begun in April of 1920, construction began to gain speed during the summer of 1921. The *News and Observer* reported in July of 1921 that ten new homes were under construction in Hayes Barton. The paper hoped that this activity denoted "the beginning of the end of the building stagnation which began during the war."⁹

The advertising campaign for the new suburb was quite simple and played directly into the early-twentieth century idea that one should live among people of similar backgrounds. The promise of homogeneity and seclusion from urban problems attracted the elite to the small estates offered in Hayes Barton early in the development of the neighborhood. The advertising then took a clever turn, using the proximity to Raleigh's elite as a selling point for the lots surrounding the Potomac Park core. A 1920 advertisement claimed that "You'd be proud - of a home in Hayes-Barton." The advertisement went on to point out that the area was "the most improved and advanced residential section ..." in the city and "has already been chosen by over a hundred of North Carolina's best families as the place where they will build their home."

Justifying the overt elitism, the ad stated that "certainly it is pardonable to be proud that your judgement is shared by such people." Emphasizing the idea of founding a private estate, the advertisement warned buyers that "every day you neglect to found your home among the beautiful hills and parks of Hayes-Barton is so much priceless contentment lost."¹⁰

The marketing scheme was very successful. Among the prestigious homes constructed during the 1920s were Wakestone, the home of Secretary Daniels; the Park-Hudson House at 1535 Carr Street, for John A. Park, *Raleigh Times* president and publisher; and 825 Holt Drive for The Honorable George W. Connor, Associate Justice of the North Carolina Supreme Court and his wife Bessie. By the late 1920s, several homes on adjacent streets such as Stone and Craig were being occupied by lawyers, engineers, upper level businessmen, insurance agents, and small business proprietors. Even after World War II, the status of the neighborhood continued with prominent citizens such as W. Herbert Weatherspoon, Vice-president and general counsel for Carolina Power and Light, constructing homes during the late 1940s and 1950s.

Just as Earle Draper represented the best available neighborhood planner, the contractors and architects utilized in the construction of individual houses among the best-known and most widely respected in Raleigh. Many of the houses from the 1920s were constructed by Howard E. Satterfield, the preeminent builder at the time. Formerly a mechanical engineering professor at State College, Satterfield gave the kind of service and produced the sort of quality demanded by the elite. A quote from his building specifications indicates his method. "The builder agrees to give his personal attention at all times and his presence as often as necessary to properly carry on the work."¹¹ Satterfield's work seemed to have often been Colonial or Georgian Revival houses such as the 1924 house for Raleigh Times president and publisher, John A. Park (inventory #33). This two-story brick house features green roof tiles, classical details, and metal casement windows. By the 1930s and 1940s, J.W. Coffey and Son had gained equal prestige with an emphasis on high value and high quality. The company "produced some of the best houses in Raleigh's new suburbs."¹² One example of Coffey's work is the Tudor Revival, brick and frame dwelling of Robert D. Beam, Manager of the real estate department at Wachovia Bank and Trust Company (inventory #55). The house, which dates from the early 1930s, has chamfered and flared posts support entry porch. Both Coffey and Satterfield's work is often found in conjunction with that of a prominent local architect..

¹⁰"You'd be proud - of a home in Hayes Barton," advertisement, *Raleigh Times*, 13 November 1920.

Among the architects utilized for some of the houses were well-known local designers such as Thomas W. Cooper, William H. Deitrick, Charles Atwood and Arthur C. Nash, and James A. Salter.¹³ Deitrick, for example, completed the design and construction administration for Dorton Arena after Nowicki's death. Arthur Nash, on the other hand worked with McKim, Mead, and White and supervised, along with engineer Charles Atwood, the mammoth Lower Campus project at the University of North Carolina.¹⁴

The quality construction and design produced for Raleigh's elite created a homogenous neighborhood, at least on the western side of Glenwood Avenue. East of Glenwood, the houses and their owners represented a more typical middle-class neighborhood similar to Bloomsbury. This area was populated by a range of people including traveling salesmen and middle management. For example, in 1930 the 600 and 700 blocks of West Aycock Street were home to a plumber, an examiner, a conductor, a sales manager, the manager of S & W Cafeteria, and the treasurer of Title Guaranty Insurance Company.

As a whole, Hayes Barton includes a predominance of Georgian and Colonial Revival houses and impressive examples of Craftsman, Eclectic French and Spanish stylizations, and a notable and relatively rare example of Norman Revival, the Williams House, located at 910 Harvey Street and dating to the late 1930s (inventory #199). Additionally, the eastern section of the neighborhood includes smaller Craftsman bungalows, Foursquares, Period Cottages, and Minimal Traditional houses. Inherent in the attraction of Hayes Barton was the promise of control over the development. The Fairview Company, which sold the lots, established covenants that determined building costs, commercial and residential zones, and ensured all-white ownership.¹⁵

The desire to protect substantial investments and maintain control over who lived in Hayes Barton resulted in racial incidents during the history of the neighborhood. In 1927, the *News and Observer* reported that "Hayes-Barton citizens boiled over last night - determined to keep Gus Russos, Greek shoe-shine parlor operator, out of their exclusive residential section at any cost." A neighborhood group known as the Hayes Barton Improvement Association met in an angry session to find a way to keep Russos out even though there was no legal justification. It was reported that "[an] injunctions appeal to the City Commissioners, boycotting the Russos

Shine Parlors, and the Ku Klux Klan were means suggested to that end.¹⁶ A similar incident in 1935 involved a fight to keep an unused sanitarium at the corner of Jarvis and Harvey from being converted into an apartment building. Residents feared multi-family housing would reduce their property values, which were protected by the current zoning that allowed only three families per building.¹⁷

These incidents reinforce the original appeal of Hayes Barton as an exclusive enclave at a time in American history when social and racial upheaval were greatly feared. Retreating to the safety of "country" suburbs, citizens felt and reacted strongly to perceived threats to their lifestyle.

As Hayes Barton and other Five Points neighborhoods continued to grow during the 1930s, commercial activity followed. The Flat Iron Building (located in Bloomsbury Historic District) is one of the earliest commercial buildings in the area. It originally housed a grocery store run by Mr. Allen, and was equipped with a gas pump. Later the building was home to Gattis' Drugstore. Within the boundary of the Hayes Barton district is a row of shops along Glennwood Avenue, south of Five Points. Several of these date from the 1930s and constituted the primary shopping area before construction on Fairview Road across the street from the Flat Iron Building created a second commercial area in the late 1940s and 1950s.¹⁸

There are only two church buildings in the district, Hayes Barton United Methodist Church and United Lutheran Church. Hayes Barton United Methodist (inventory #140, 2209 Fairview Road) was constructed in the mid-1950s and United Lutheran Church (inventory #151, Glennwood Avenue) was constructed in the mid-1960s. Both have Modernist influences. However, a few homes in the District were constructed by or for pastors of churches in the area, such as the First Presbyterian Church Parsonage (1531 Caswell Street, inventory #52), a Georgian Revival home built in the 1930s and resided in by Rev. Patrick D. Miller.

The creation of the second shopping area by the early 1950s indicates the continued growth and popularity of the neighborhood during the postwar era. Although there are relatively few houses from the 1950s and even fewer from 1960 through 1990, Hayes Barton is experiencing a period of significant construction and remodeling. As in-town neighborhoods have come back into favor, Hayes Barton is again one of the most sought after addresses in Raleigh.

5. Zone 17 Easting 712100 Northing 3964050

Verbal Boundary Description

The boundary of the Hayes Barton Historic District is shown as a solid line on the accompanying map entitled, "Hayes Barton Historic District," at a scale of 1" = 200'.

Boundary Justification

The boundary of the neighborhood closely follows the original c.1920 plat map. Resources not within the original plat are located on the west side of St. Mary's Street between Colonial Road and Fairview Road (twelve buildings). These residences are similar in design, scale, materials, and age to those in the area of the original plat, particularly the houses to the south on St. Mary's Street. They were likely built in response to the proximity of the lots to the Hayes Barton Historic District.

7. Description

227 847 Holt Drive House 2007 Non-contributing, age

Colonial revival. Two-and-a-half-story, symmetrical, painted brick, side-gable roofed dwelling. Five-bay northeast (front) elevation is dominated by two-story, full façade porch supported by slender, rounded columns, and flanked by two-story, single-bay, recessed wings. 6/9 wood windows on the first floor accompanied by cornice lintels, 6/6 wood windows on the second floor. Central double-leaf entry door features transom and door surround with pilasters and cornice. Three front gable dormers at the roof. Has three brick chimneys. The house was constructed in 2007 to replace the c. 1950 Bradshaw House, formerly at 847 Holt Drive, which was a contributing building to the Hayes Barton Historic District. The Bradshaw House was demolished in 2007.¹

227a Guest House N/A

The Guest House, which was noted to be a contributing building in the original district was demolished in 2014.²

227b Garage ca. 1950, 2014 Non-contributing, integrity

One-story, front gable, three-bay, frame garage. Appears to be original garage, but has undergone renovations in recent years, including the attachment of a pent roof that spans the front elevation. Additionally, paired 6/6 windows removed from gable end and replaced with smaller singular 4/4 window. This resource was omitted from the original nomination.
